

Final tasks

1. Create a wishlist page with search functionality so users can search for other users' wishlists. This is similar to Amazon wedding list:
https://www.amazon.com/wedding/search?nameOrEmail=&ref_=wedding_home_stripe
2. Affiliate program for influencers: I need to offer affiliate programs for influencers where they can create their wish lists and share them with users. Also, their wish list will be discoverable in the wishlist page.
3. Change registration process. Right now there are duplicate fields and also the process is complex. You sign up and receive an email with a password. I would like to change that, and force the user to create their own password when they are filling the sign up form.

REGISTRARSE

After login in or signing up redirect users to the homepage so they can start shopping.

4. In the checkout page, I would like to uncheck the option “ship to another address” by default. So the checkout page is smaller.

Nombre de la empresa (opcional)

5. Add paypal credit button in checkout page. And also change the image of the button

6. Change homepage design
7. Create “on sale” page and fix “under \$10” page.
